CV Last Updated: 24 April 2026

Eden stealth CV-1

PROFESSIONAL PROFILE

I am an Aerospace Engineer concerned with the development of aircraft and spacecraft. I command both branches of aeronautical engineering and astronautical engineering. Advanced in the interaction of Aerospace Engineering technologies: Aerodynamics, Air Propulsion, Avionics, Materials Science, Structural Analysis, and Manufacturing.

I am also currently pursuing my Airline Transport Pilot License (ATPL) to unify engineering precision with operational flight capability.

I have developed a proprietary real-time lift computation avionics system leveraging angle-of-attack (AoA) inputs to enhance in-flight performance monitoring and safety margins. I am experienced in defense-aligned aerospace environments demanding absolute precision, confidentiality, and direct action/mission/operation-readiness.

CORE COMPETENCIES

Aerospace Engineering: Aerodynamics | Air Propulsion | Avionics | Materials Science | Structural Analysis | Manufacturing Integration

Programming & Development: Java | JavaScript | Node-RED | MongoDB | Postman | HTML | CSS | VS Code | GitHub

Operations & Support: Desktop Support | User Acceptance Testing (UAT) | Customer Experience (100% OSAT Track Record) | Technical Troubleshooting

PROFESSIONAL EXPERIENCE

Aerospace Engineer (Private / Defence Sector)

2023 – Present

- Designed and developed a proprietary real-time lift computation avionics platform that processes angle-of-attack (AoA) sensor data to calculate instantaneous lift coefficients, providing pilots and autonomous systems with enhanced aerodynamic awareness.
- Integrated aerodynamic principles with computational execution to produce deterministic, low-latency flight envelope monitoring tools.
- Maintained defense-aligned confidentiality and precision standards across all engineering outputs.
- Continued research and development into the intersection of flight dynamics, real-time data processing, and predictive anomaly detection for mission-critical aerospace applications.

BeSpoke International Group

April 2023 – August 2023 | Location: Mount Edgecombe, RSA | **Chat/Email Customer Experience Advisor & Desktop Support | Matalan (UK Campaign)** | Reason for leaving: To work with Defence Intelligence of the SANDF on cryptography for on-field operatives.

- Delivered 100% customer satisfaction results assisting end-users of the UK Matalan campaign, consistently exceeding weekly performance targets.
- Provided concurrent desktop support to colleagues, resolving computational problems daily and reducing team downtime by an estimated 25%.
- Developed lightweight internal computer programs that progressively automated repetitive workflows, increasing daily operational efficiency.
- Acted as the de facto technical first responder for hardware and software issues across a team of 40+ advisors.

uConnect (Mobile Virtual Network Operator - MVNO)

December 2022 – March 2023 (3-month contract) | Location: Hillcrest, RSA | **Full-Stack Software Developer**

- Single-handedly built an internal bulk-mailing automation project for uConnect using Node-RED, JavaScript, MongoDB, Infobip API, Postman, and complementary technologies.
- Ran User Acceptance Testing (UAT) every morning for the mobile app, ensuring zero-production-defect delivery across all weekly releases.
- Architected the end-to-end flow from database query to email delivery gateway, reducing manual mailing effort by approximately 70%.
- Documented all API integrations and automation workflows for internal knowledge transfer and future maintenance.

Capita

November 2021 – September 2022 | Location: Umhlanga, RSA | **Customer Experience Advisor | O2 Mobile (UK Campaign)** | Reason for leaving: Relocation to Cape Town to join an Advanced Software Development bootcamp

- Delivered exceptional customer experience results for the UK O2 voice campaign, consistently exceeding key performance indicators including first-call resolution and customer satisfaction scores.
- Maintained professional composure under high call volumes while resolving complex technical mobile service issues.
- Recognized internally for de-escalation skills and ability to translate technical faults into clear customer-friendly explanations.

CurioSoft

1 Year (internship) | Remote | **Software Developer (intermediate – Java)**

- Developed and maintained backend Java modules for enterprise client projects within an Agile team environment.
- Assisted in debugging, unit testing, and documentation of production-level code.
- Gained practical exposure to software development lifecycles (SDLC) and version control workflows using Git.
- Collaborated with senior developers to implement feature requests and resolve production tickets.

CCI

January 2020 – October 2020 | Location: Umhlanga, RSA | **Technical Support | Altice Optimum (USA Campaign)** | Reason for leaving: Education (To pursue a Computer Science degree with Richfield Graduate Institute of Technology)

- Provided technical support for Altice Optimum, troubleshooting cable and set-top box issues for residential customers across New York, New Jersey, and Connecticut.

Magaye Internet Café

December 2017 – December 2018 | Location: Hammarsdale Junction/Mall (Unit 2) | **Operations Manager**

- Managed daily operations independently, including network maintenance, customer service, cash reconciliation, and inventory tracking.
- Reduced system downtime by 30% through proactive hardware and software maintenance schedules implemented without external IT support.

- Trained junior staff in basic IT support, customer handling protocols, and point-of-sale system operations.
- Developed foundational skills in business operations, troubleshooting under pressure, and end-user support.
- Web Development (HTML, CSS & JavaScript)

EDUCATION & CERTIFICATIONS

Richfield Graduate Institute of Technology

- **Class of 2019**
- **NQF Level 4 Certificate (matric equivalent)**
- **Information Technology (Technical Support)**
- **Student Number: 144830**
- **SAQA ID: 78964**

Google Developers Launchpad

- **Year 2022**
- **Certificate of Completion**
- **HTML**
- **Certificate ID: 1650618060937**

SimpliLearn

- **Year 2025**
- **Certificate of Completion**
- **Machine Learning**
- **Certificate Code: 7740192**

SimpliLearn

- Year 2025
- Certificate of Completion
- Natural Language Processing & Text Mining
- Certificate Code: 7740356

Additional Ongoing Development:

- Airline Transport Pilot License (ATPL) – Ground school and flight hours in progress
- Advanced Aerospace Engineering via Eden stealth CV-1

FLIGHT STATUS

- **Airline Transport Pilot License (ATPL):** Currently in progress – theoretical knowledge and flight hour accumulation ongoing.
- **Single-Engine Land (SEL) Capability:** Pre-license proficiency demonstrated; practical flight experience logged.
- **Flight Systems Understanding:** Deep familiarity with flight instruments, performance calculations, weight-and-balance, aviation regulations, and meteorology.
- **Cross-Disciplinary Application:** Actively applying aerodynamic engineering principles to flight training, bridging computational models with real-world piloting execution.

PROFESSIONAL STATEMENT

I operate at the intersection of aerospace logic and computational execution.

I design resilient systems. I anticipate failure before it manifests. I build with intent and purpose and meaning.

ADDITIONAL INFORMATION

- **Languages:** English (fluent) | isiXhosa (native)
- **Security Awareness:** Trained in defense-aligned confidentiality and data handling standards
- **Availability:** Immediate for contract or permanent roles; open to relocation
- **Driver's License:** Not Yet
